Coil processing lines

Coil Processing Lines are areas where cutting edges are extremely critical.

Bad quality of cutting edges can result in down time in those high productive continuous processes by breakages, it can declass the coil, or causing rejection further down stream.

At this stage of processing the quality definition of cutting edge may already be specified by the customer.

- **Pickling Lines**
- **Coating Lines**
- **Painting Lines**
- **Sheeting Lines**
- **Skin Pass Mills**
- **Cold Rolling Lines**
- **Galvanizing Lines**
- **Tinning Lines**
- **Inspection / Test Lines**

Angelo Romani rotary and straight knives for the Coil Processing Lines are manufactured in a modern, efficient production facility, using industries highest standard of equipment, operated by dedicated experienced staff.

The typical Angelo Romani surface finish and tolerances ensures trouble free use of the knives.

The materials used for those knives are based upon requirements and properties of the coils processed, varying from standard Tool Steel to High Speed Steel, Powder Steel and Tungsten Carbide Steel.

Welder Shear

Rotary Knives; Straight Knives

Notching Shear

Single Part Knives; Multi Part Knives

Cut to Length Shear

Straight Knives; V-Shaped Knives; Angle Knives

Side Trimmer Shear

Single Cutting Edge Knives;

Double Cutting Edge Knives

Scrap Chopper Shear

Straight Knives; Curved Cutting Edge Knives;

Multiple Cutting Edge Knives

Flying Shear

Solid Knives; Inserted Knives

Rotary Drum Shear

Straight Clamped Knives; Bend Clamped Knives
